atom-live-server package

Launch a simple development http server with live reload capability.

This package is based on awesome [Live Server](#) project.

Usage

`ctrl-alt-l` launch live server on port 3000.

`ctrl-alt-q` stop live server.

`ctrl-alt-3` launch live server on port 3000.

`ctrl-alt-4` launch live server on port 4000.

`ctrl-alt-5` launch live server on port 5000.

`ctrl-alt-8` launch live server on port 8000.

`ctrl-alt-9` launch live server on port 9000.

Options

If a file `.atom-live-server.json` exists in project root it will be loaded and used as options.

The keys of `.atom-live-server.json` should match **Command line parameters** in [live-server](#).

Example: Launch specific browser

```
{
  "browser": "safari"
}
```

Example: Start server without browser opened

```
{
  "no-browser": true
}
```

Example: Serve this file for every 404 (useful for single-page applications)

```
{
  "entry-file": "index.html"
}
```

Example: Serve this directory as root path

```
{
  "root": "public"
}
```
